The application has been amended as follows:

Claims 18-24 have been cancelled.

Tubes within a radiant heating section of a coking furnace are arranged differently than in a single vertical column and connected together in a simple, planar serpentine pattern. The tubes are arranged in a plurality of offset or staggered vertical

columns. This arrangement permits the upper tubes to be close to the radiant heat source and also allows the tube bends connecting adjacent tubes to be of greater radius, so that the pressure at which the feedstock is passed through the tube bundle can be lower allowing more vaporization of the cracked process fluids. ---

4. The following is an examiner's statement of reasons for allowance: The declaration of Brian Jay Doerksen under 37 CFR §1.131 has been considered and found to overcome the effective dates of references Barnett et al. and Gibson et al. applied under 35 USC §102(e).
